Caverion provides building solutions to Uppsala University

Caverion has signed a contract with general contractor NCC on delivering ventilation & air conditioning and electricity solutions as well as information and communications services to Uppsala University's new office building, Segerstedthuset. The value of the contract is approximately EUR 5.4 million and it covers project management and project execution.

The new office building will have a total floor area of 22,100 m² and it will house 600 office workers, including the university's management and administration. The building is scheduled to be completed during spring 2017.

"We are proud to contribute to the continued development of one of Sweden's oldest and most esteemed universities. When completed, Segerstedthuset will be a modern office building with intelligent and user-friendly technical solutions that provide a comfortable work environment for employees, students and visitors alike," says Thomas Jansson, District Manager at Caverion Sweden.
